

# TEE – TechniaTranscat Engineering Experience

## TechniaTranscat Engineering Experience (TEE)

Your first step to PLM

Transcat Engineering Experience (TEE) is **25 years of our experience with technical complexities transformed into simple solution** based on 3DEXperience platform.

We learned that most of small companies and departments are under constant time pressure to deliver their outputs and the requirements of their customers are constantly changing which leads to frequent changes in designers' task priorities. It is highly demanded to have an intuitive modern web-tool to manage and track these tasks with all related data but to bring the complexity of ENOVIA into this dynamic environment was almost impossible (no time for analysis, implementation, testing etc.)

Transcat Engineering Experience solves this issue with **simple approach of preconfigured ENOVIA with a LEAN ENGINEERING app**, which enables access to all information and data on 1 screen. This makes the life of designers and design managers easier thanks to the ability to add new tasks and reprioritize them constantly in real-time. LEAN ENGINEERING app therefore reflects the real-life situation and priorities. TEE proves that **even small customers can use ENOVIA to manage their time, data and flow of work** with a system which is used by big players.

Everything on 1 screen:

- Tasks
- Workflow
- Data
- Search

As the TEE solution requires only **basic installation and configuration**. User interface is based on simple and proven experience tool for organizing task list used in Lean Manufacturing methodologies therefore the user adoption is quick and requires a **minimum training period**.

TEE is the ENOVIA solution which answers the need of small customers/departments and at the same time opens the door for future growth.

## Main Features:

- Automatic title-block generation
- Automatic .tif-Checkin after approving a CAD-document
- TEE-CATIA V5 standard
- Task management and overview within the construction project
- Drag & Drop functionality
- Integrated 3D-Viewer
- OEM-release support

With TEE you are able to bring the well-known LEAN methodology into your Engineering department and combine it with Product Data Management. The main benefit from using TEE at your design department is **eliminating unimportant tasks in the daily work** of designers, known as Wastes. The wastes lead to activities like over-production (designs that are not in priority right now or at all, re-inventing designs), unnecessary movements (working on parallel projects/tasks at the same time), waiting (approvals, decisions) and defective outputs (errors and rework).

## Benefits:

- More Efficient Design
- Part Count Reduction
- Faster Delivery Times
- Manufacturing Labor Reduced
- Better predictability of time and cost

## Making product creation easier

### TechniaTranscat GmbH

TechniaTranscat stands for more than 30 years of experience, development and innovation in PLM supplying Product Lifecycle Management (PLM) solutions for creating and managing product information throughout the entire product lifecycle. Our portfolio is based on the PLM software solutions developed by Dassault Systèmes (3DEXPERIENCE, CATIA, ENOVIA, DELMIA, SIMULIA and EXALEAD). In addition, TechniaTranscat has a wide range of services: consulting, project design, training and on-site support for users. Development of standard and customized software for CATIA, ENOVIA & JT as well as the safeguarding and the operation of the existing PLM applications and infrastructure complete the portfolio.

By combining your strengths with our expertise in Product Lifecycle Management (PLM) we will help you to turn your vision into value and become the future winner. Our solutions are used worldwide in industries such as industrial equipment, automotive, construction, energy, telecom/electronics, life sciences, fashion and consumer goods.

TechniaTranscat, with more than 420 employees, has business in the whole Europe, India and North Americas. The main offices are located in Karlsruhe, Germany and Stockholm, Sweden. With our 360 CATIA, ENOVIA, SIMULIA & DELMIA experts we have both the skills and the knowledge needed to assist you with your PLM initiatives. We serve over 4000 customers worldwide, including 43 that are listed on the Fortune 500. TechniaTranscat is a part of Addnode Group, listed at the Nasdaq OMX Nordic List.
